## Profile® Golf

### **YOUR TOTAL GROWTH PARTNER**

Profile Golf is the game's premier provider of proven golf course product solutions that are scientifically formulated to establish, maintain, and improve turfgrass and surrounding vegetation across every high-profile area of a golf course. Whether you're working on bold new course designs, ambitious renovations, or everyday maintenance, Profile Golf's scientific soil amendments, agronomic experts, and high-performance vegetative and erosion-control solutions will improve grow-in, optimize play, simplify upkeep, and maximize your course's aesthetic appeal.

# Bluejack National Course

Montgomery, TX

The Game's Biggest Name Commands Perfect Greens

---

## THE NEED:

Tiger Woods' first designed course required nothing less than absolutely perfect greens. Profile's experts suggested a 90-10 sand to Profile Porous Ceramic (PPC) Greens Grade soil amendment ratio for all 18 greens and a putting course.

## THE RESULTS:

Accelerated grow-in with less fertilizer needed and strong root mass requiring less water and fewer nutrients for long-term optimal play – not to mention, a winning opening day!

# Scioto Country Club

Columbus, OH

Members Order Up Faster Greens; Profile Delivers

---

## THE NEED:

Longtime club members demanded faster, firmer greens. An 80-10-10 sand, soil, Profile Porous Ceramic (PPC) Greens Grade amendment ratio would need to bring improved infiltration rates to do so.

## THE RESULTS:

Reduced build-up of organic material, minimized compaction, and decreased need for fertilizer by 25 percent, and the greens were just what the members ordered – enough to attract the 2016 Senior Open, too!

# Ayla Oasis Golf Course

Aqaba, Jordan

Profile Helps Course Overcome High Heat, Poor Water Quality

## THE NEED:

The first 18-hole golf course in Jordan endures intense desert heat and poor water quality with high levels of total dissolved salts. Adding Profile Porous Ceramic (PPC) Greens Grade soil amendment at a 85-15 sand-to-amendment ratio did the trick.

## THE RESULTS:

Improved water and nutrient holding capabilities that also promoted good drainage to keep away unwanted elements of the poor water for consistently championship-caliber greens year after year.

**THE NEED:**

Consistently PGA ranked as a “Best Maintained Golf Course,” Desert Mountain needed years of topdressing buildup removed and a layer of Profile Porous Ceramic (PPC) Greens Grade added for long-term championship-level playability in the harsh Sonoran Desert.

**THE RESULTS:**

Restored non-capillary and capillary balance to ensure tournament performance, increased infiltration and flushing capabilities while adding valuable nutrient retention. Work was completed prior to the hugely successful Charles Schwab Cup Championship.

# Desert Mountain Cochise Course

Scottsdale, AZ

“Best Maintained Course” Team Taps Profile for Renovation

---

**THE NEED:**

The Tom Fazio team rebuilt this historic course, but turned to Profile to create root zone blends for championship greens. An 85-15 blend of sand to Profile Porous Ceramic (PPC) Greens Grade amendment was called upon. In addition, Profile’s Flexterra High-Performance Growth Medium and its unique hydro mulch were tasked to stabilize slopes and keep seed in place for grow-in.

**THE RESULTS:**

Zero wash-out or erosion and greens enjoyed accelerated grow-in for the course’s on-time re-opening. Adare Manor now makes a compelling case for hosting the Ryder Cup!

# Adare Manor Golf Course

Limerick, Ireland

Historic Course Rekindles Ryder Cup Aspirations

---

**THE NEED:**

The Greg Norman signature course built atop rolling dunes with 50 meters of elevation changes required the use of on-site sand that was a serious liability for developing championship greens. Adding Profile Porous Ceramic (PPC) Greens Grade was a game changer.

**THE RESULTS:**

Improved water and nutrient-holding capabilities and increased drainage rates by 25 percent for beautiful greens built for the long-term, along with the financial benefit of using on-site sand.

# KN Golf Links Cam Ranh

Khanh Hoa Province, Vietnam

Profile Makes the Impossible Possible For Asia’s #1 Course

# Profile Golf is Your Total Growth Partner

**“WORKING WITH PROFILE IS NOT JUST ABOUT QUALITY PRODUCTS. THE KNOWLEDGEABLE PROFILE STAFF AND THE COMPANY ITSELF MADE OUR RECONSTRUCTION A GREAT EXPERIENCE.”**

Shawn Emerson, Director of Agronomy at Desert Mountain (Scottsdale, AZ)

**“OUR MEMBERS WANTED FIRM GREENS, AND INCORPORATING PROFILE POROUS CERAMICS IN THE ROOT ZONE MIX HAS ALLOWED US TO EXTEND THE DAYS BETWEEN IRRIGATION CYCLES PROVIDING THE FIRM GREENS WE WANTED. THE DECISION TO USE PROFILE POROUS CERAMIC IN OUR GREENS HAS PROVEN TO BE A VERY GOOD INVESTMENT.”**

Bob Becker, Superintendent, Scioto Country Club (Columbus, OH)

**“I STRONGLY BELIEVE IN WHAT I’VE SEEN WITH THESE PRODUCTS, AND I WOULDN’T GO DOWN WITHOUT A FIGHT TRYING TO CONVINCING THE OWNERS BUILDING A NEW GOLF COURSE OR NEW GREENS TO REALLY LOOK INTO THE COST AND BENEFITS OF USING PROFILE.”**

Eric Bauer, Director of Agronomy, Bluejack National (Montgomery, TX)
